4. Beiheft

zum Jahrbuch der Hamburgischen Wissenschaftlichen Anstalten. XXXII. 1914.

Meteorologische Beobachtungen

auf der

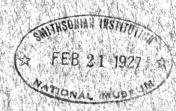

Hamburger Sternwarte in Bergedorf

im Jahre

1914

Herausgegeben vom Direktor Dr. R. Schorr

In Kommission bei Otto Meissners Verlag Hamburg 1915. Das vorliegende Heft enthält die Zusammenstellung der im Jahre 1914 auf der Hamburger Sternwarte in Bergedorf ausgeführten meteorologischen Beobachtungen. Ihre Ausführung, Bearbeitung und Anordnung erfolgte nach den gleichen Grundsätzen wie in den früheren Jahren, auch hinsichtlich der benutzten meteorologischen Instrumente ist keine wesentliche Änderung eingetreten. Es darf deshalb zur Erläuterung der nachstehenden Zusammenstellung auf die Darlegungen in der Einleitung zu den "Meteorologischen Beobachtungen der Hamburger Sternwarte in Bergedorf in den Jahren 1910 und 1911" verwiesen werden.

In den Monats- und Jahresübersichten des vorliegenden Heftes sind außer den Mittelwerten des Jahres 1914 auch diejenigen angegeben, die sich aus der ganzen Bergedorfer Beobachtungsreihe von 1910 bis 1914 ergeben. Bei den Luftdruckmitteln sind die im vorigen Jahrgang angegebenen Korrektionen auf das Normalbarometer des Königlich Preußischen Meteorologischen Instituts berücksichtigt.

Die Ablesungen 9°, 12°, 4° sowie die stündlichen Aufzeichnungen der Bewölkung bei Nacht wurden während der ersten Hälfte des Jahres in wöchentlichem Wechsel von den Gehilfen W. Gosch und Greßmann ausgeführt; in der zweiten Hälfte trat infolge der Sonnenfinsternis-Expedition der Sternwarte und des Kriegsausbruchs ein mehrfacher Wechsel der Beobachter ein. Es beteiligten sich dann an den Beobachtungen die Gehilfen F. Gosch, Greßmann, Senkpiel, Wenck und Pein. Die Ablesungen 7° wurden in wöchentlichem Wechsel von dem Observatoriumsgehilfen Beyermann und dem Maschinisten Rohde ausgeführt. Die Beobachtungen 2° sowie die Bedienung der Registrierapparate besorgte die technische Hilfsarbeiterin Frl. Köhncke und vertretungsweise Frl. Rühl, an Sonntagen auch Dr. Messow und der Observatoriumsgehilfe Beyermann.

Die Bearbeitung der meteorologischen Tagebücher erledigte Frl. Köhncke, in den Monaten März bis Mai Frl. Rühl.

Die Leitung des meteorologischen Dienstes führte der Observator der Sternwarte Prof. Schwaßmann mit Unterstützung von Dr. Messow.

Bergedorf 1915 Juni 21.

Der Direktor der Sternwarte R. Schorr.

I

Stunden-Beobachtungen

12a, 4a, 7a, 2p, 9p

1914

Erläuterung zur nachstehenden Zusammenstellung:

Zeit: Mittlere Zeit Bergedorf ($\varphi = 53^{\circ}28'46'', \lambda = 40^{m}57^{5}74$ ö. v. Gr.) für Stundenbeobachtungen, sonst Mitteleuropäische Zeit (12a = Mitternacht, 12P = Mittag).

Luftdruck: Millimeter, bezogen auf o° C und Normalschwere, gültig für die Meereshöhe

von 35.153 m über Preußisch Normal Null.

Lufttemperatur: Celsius-Grade nach dem Assmannschen Aspirations-Psychrometer P in

französischer Hütte B.

Grenzwerte der Lufttemperatur: 2 m über Erdboden nach Grenzwertthermometern in englischer Hütte A; am Erdboden nach frei aufgestellten Grenzwertthermometern.

Feuchtigkeit: Absolute in Millimetern, relative in Hundertteilen.

Windstärke: Staffel o bis 12. Bewölkung: Staffel o bis 10.

Niederschlag: Millimeter; die Tagesmenge bezieht sich auf die Zeit von 7ª bis 7ª.

Sonnenschein: Stunden.

Mittelwerte: Bei Luftdruck, Windstärke, Bewölkung: Mittel = $\frac{1}{5}$ (12a + 4a + 7a + 2p + 9p),

bei Lufttemperatur und Feuchtigkeit: $M^* = \frac{1}{4} (7^a + 2^p + 2 \times 9^p)$.
